

Kong Zhi Syuen

Kuala Lumpur, Malaysia | sseankong52@gmail.com | +60 125922388 | github.com/Sseankzs | linkedin.com/in/kongzs/

Education

Universiti Teknologi PETRONAS, BS in Computer Science (Hons) | Minor in Financial Management Sept 2021 – Dec 2025

- CGPA: 3.74/4.0
- **Coursework:** Algorithm and Data Structures, Object Oriented Programming, Distributed & Parallel Computing

Missouri University of Science and Technology, Student Exchange Programme Aug 2023 – May 2024

- CGPA: 3.778/4.0
- **Coursework:** Computer Security, Business Analytics & Data Science, Intro to Artificial Intelligence

Technical Skills

- **Languages:** Python, JavaScript, TypeScript, SQL
- **Cloud & DevOps:** AWS Lambda, API Gateway, Amplify, DynamoDB, S3, Render
- **Tools & Platforms:** Git, GitHub, Power Automate, Power Pages, Raspberry Pi
- **Databases:** MySQL, Firebase, Supabase
- **Frameworks:** Flask, React, Flutter
- **Machine Learning & CV:** YOLOv8, ONNX, OpenCV, PyTesseract, NumPy, Pandas

Projects

Palm Biometric Payment System (Team Lead) github.com/Sseankzs/PayPalm

- Delivered a real-time palm detection system for biometric payment prototyping, validated through integration with a Flask backend, by building an ONNX/YOLO-based computer vision pipeline.
- Optimized embedded computer vision deployment on Raspberry Pi 5, demonstrated by identifying performance bottlenecks, through real-time inference experiments and hardware integration.

ANPR and Vehicle Classification (Team Lead) github.com/Sseankzs/Number-Plate-Detection

- Delivered an automated toll system for Malaysian highways, validated by real-time license plate detection, by building a YOLOv8 and PaddleOCR multi-stage asynchronous pipeline integrated with Firebase and Google Drive.
- Achieved production-ready license plate recognition accuracy, demonstrated through 29 iterative training runs, by engineering custom YOLO models on 3 curated Malaysian datasets and building a full workflow for vehicle detection, ROI selection, OCR, and cloud integration.

RNA-Seq Gene Expression Based Cancer Detection github.com/Sseankzs/rna-cancer-classification

- Achieved research-grade cancer detection, validated by $\geq 99\%$ classification accuracy, by training and deploying multiple ML models (SVM, Random Forest, MLP) on TCGA, GTEx, and TARGET gene expression datasets with 500-gene feature selection.
- Deployed a scalable, end-to-end full-stack app using Next.js and FastAPI APIs for model inference, with Supabase authentication and AI-generated insights.

SME Funding Matchmaker (Team Lead) github.com/Sseankzs/keystone

- Delivered a full-stack AI-powered grant matching platform for SMEs, validated by real-time dual-portal engagement, by architecting Next.js 14, TypeScript, and AWS Lambda serverless functions.
- Enabled automated grant guidance and personalized recommendations, demonstrated through eligibility screening and task tracking, by integrating AWS Bedrock for NLP-driven matchmaking and application assistance.

Experience

Intern, Bank Negara Malaysia – Kuala Lumpur, Malaysia May 2024 – Dec 2024

- Automated compliance workflows using Power Automate, reducing manual **processing time by 20%** division-wide.
- Optimized the Data Compliance Report portal (Power Pages + JS) to handle **10,000+ annual logins and 9,000 submissions**, ensuring stability during a **5% spike** in activity.

Course Grader – Database Systems, Missouri University of Science and Technology Jan 2024 – May 2024

- Graded assignments and provided detailed feedback for **100+ students**, strengthening understanding of relational databases and SQL.
- Collaborated with a **team of 3 TAs** to support the instructor and manage coursework.
- Reduced grading **turnaround time by 33%**, demonstrating strong attention to detail and time management under strict deadlines.
